## Enable Gas Transmission, LLC (EGT)

## **Gas Quality Policy**

EGT hereby gives notice of the circumstances in which it will exercise its discretion with respect to receipts of natural gas that do not meet the quality specifications in Section 4 of the General Terms and Conditions of its FERC Gas Tariff. As a general policy, EGT seeks to make as much gas available to its customers as it can, without risking harm to its facilities and while maintaining merchantability. Accordingly, to the extent that EGT can blend gas supply receipts that do not meet the "Total Heating Value" criteria of Section 4.2 with sufficient gas volumes to bring the commingled gas within EGT's tariff specifications prior to delivery, or can agree with Shipper to cause the gas to be subject to cleaning, gas conditioning or processing to bring the gas within EGT's tariff specifications, EGT may do so. In the event that there are insufficient volumes downstream of the receipt point to commingle with gas supplies not meeting the "Total Heating Value" criteria, or the operational capability to clean, gas condition or process is not available, then EGT will retain the option to refuse receipts of said gas. Similarly, to the extent received gas does not meet the criteria of Section 4.3, Objectionable Matter, including but not limited to water vapor (4.3(e)), oxygen (4.3(f)), carbon dioxide (4.3(g)), nitrogen (4.3(h)), and hydrocarbons (4.3(i)), and such gas can be accepted without risk to EGT's facilities, and can be commingled with other gas supplies received to achieve merchantability prior to delivery, as a general policy, EGT will receive such gas. These policies will be applied in a manner that is not unduly discriminatory. This posting is intended to provide notice of EGT's exercise of discretion with respect to gas quality, but is in no way intended to deviate from or modify the rights, obligations and responsibilities placed on EGT and Shippers, respectively, in EGT's FERC Gas Tariff.
