

Enable Oklahoma Intrastate Transmission, LLC (EOIT): System Operations Order

This System Operations Order is being issued to ensure the safe, efficient, and reliable operation of the EOIT pipeline system, effective for Gas Day May 19, 2022, beginning with the Timely nominations cycle.

This System Operations Order has been put in place to notify all firm shippers without specific receipt point entitlements that at least 25 percent of their total delivery nomination must be sourced from the East Zone of EOIT's system. This System Operations Order will remain in effect until changed or terminated by EOIT.

In the event that, in EOIT's sole discretion, actions undertaken pursuant to this System Operations Order are insufficient to remedy the situation, EOIT shall take such actions as are reasonably necessary to maintain reliability of service. This could include scheduling reductions of West Zone receipts as necessary.
