

Enable Oklahoma Intrastate Transmission, LLC (EOIT): System Operations Order

A System Operational Order (SOO) is being issued pursuant to Section 8.3 of EOIT's Statement of Operating Conditions (SOC) to advise shippers that, beginning Gas Day January 13, 2024, shippers will be required, unless shipper receives express written consent otherwise from EOIT, to maintain physical receipts (i) at or above scheduled volumes, (ii) at or above physical deliveries and (iii) within contractual arrangements. EOIT anticipates it will be unable to support short imbalance positions and will be unable to provide any tolerance for short positions outside of firm contractual rights and, accordingly, EOIT may reduce scheduled delivery quantities intraday to balance actual receipts and deliveries as necessary to maintain system deliverability and operational integrity. Penalties for failure to comply with this SOO will be assessed in accordance with the SOC beginning with Gas Day January 13, 2024. EOIT will continue to monitor the pipeline's pressure and imbalances and will, if necessary, take further actions. EOIT will provide services in accordance with the customer's contractual rights. It is anticipated that this SOO will remain in effect through Gas Day January 16, 2024, and may be extended beyond that date. EOIT will update this SOO as more information becomes available.

For your convenience, the SOC can be found at EOIT's website via the following link under the Statement of Operating Conditions menu: <https://pipelines.energytransfer.com/ipost/EOIT/>

If you have any questions concerning this SOO please contact your Scheduling Representative.
